

The T-Metrics TM-2000 ACD offers:

Observe Agents from Anywhere

A supervisor working from home or while traveling, can log in and observe the agents' performance as if they were on premise. If you outsource your call center services, you should insist on having remote access so you can observe calls, ensuring service levels and customers given quality service. All queue and agent information is available to the supervisor. You can monitor service level agreements, number of calls in queue, time of the oldest call, and real-time status of each agent.

The screenshot displays the T-Metrics ACD Agent software interface. At the top, there is a menu bar with 'File', 'Edit', 'Agent', 'Skill', 'Messages', and 'Help'. Below the menu bar, the status is set to 'Available', and there are fields for 'Caller ID', 'Hold Time', and 'Skill Set'. The 'Skills' section shows a table with columns for Skill, Avail, Ready, Level, In Q, Oldest, Wait Avg, Msgs, Total, Ansd, Aban, Aban Avg, Aban %, ASA, SLA, Group, Off, and Filter. The 'Agents' section shows a table with columns for Agent, Ext, Skill, Task, State, Time, Status, Time, ACD Calls, ACD Avg, Non-ACD, Non-ACD Avg, Emails, and ACD Caller ID. The interface also includes a 'Connected to Server' status bar and a 'Messaging' button.

Skill	In Queue	Messages
Bill	0	1
Marketing	0	1
Operator	8	7
Sales ACD	3	7

Listen and View. The supervisor can select any agent they are responsible for that is equipped with a TAP and select to listen in on the conversation and/or they can choose to view the desktop screen that the agent is viewing in real time.

Unauthorized Access, Not Allowed. The remote supervisor needs a USB HASP® key along with the proper sign on name and password. This USB security key prevents anyone without it to have access to the system for observation purposes.

All you need is an Internet connection; you will **not need** to tie up telephone resources to observe or barge in.

No additional hardware is required at the main server and the remote monitoring supervisor only needs a PC with the USB HASP® key.
